

Q1  
2014

*financial report*  
*first quarter 2014*

**Helgeland Boligkreditt AS,**  
Accounts first quarter 2014.

**General information**

Helgeland Boligkreditt AS was established in 2008 and is a fully-owned subsidiary of Helgeland Sparebank. The company is located at the bank's head office in the town of Mo I Rana.

The company obtained a license as a finance institution in 2009 and can issue covered bonds (bonds where investors are secured collateral in property through mortgages issued by Helgeland Sparebank). The bank delivers services such as following up customers, management of loans, as well as a number of administrative services. The General Manager is employed with a 35 % position.

**Accounting standards**

The accounts are conducted in line with international financial reporting standards (IFRS). All numerical quantities are given in thousands if not otherwise stated. Helgeland Boligkreditt is listed on the Oslo Stock Exchange as a bond issuer.

**Rating**

The importance of having an official rating has become increasingly important as new regulatory requirements for liquidity and equity are implemented. In light of this, it was important to establish a rating from a recognized rating agency. On 4 April 2014 Moody's assigned a definitive long-term rating of Aaa to the mortgage covered bonds issued by Helgeland Boligkreditt AS. The company is very satisfied with the assigned rating.

**Results 1st Quarter**

Profit before tax was 19.2 million. This is an increase of 4.1 million compared to the same period last year. Net interest and commission income increased by 4.1 million and was 22.6 million. This is due to both declining borrowing costs and interest rate changes on an ongoing loan portfolio which was completed in Q2 2013. Operating costs in NOK is equal to the corresponding period last year; 3.3 million

**Key figures per 31.03.14 (31.03.13)**

- Net profit MNOK 14.0 (10.8)
- Net interest MNOK 22.6 (18.4)
- Operations costs MNOK 3.3 (3.3)
- Return on equity 18.9 (13.8) %
- CET1 capital ratio 16.8 (15.8) %
- Cover pool ratio of fullness 23 (16) %
- Indexed LTV 53 (53) %

**Balance development**

Combined assets constituted MNOK 4,508.7. Of this, 95% was lending to customers.

**Cover pool**

By the end of the quarter the mortgage company had 5,460 mortgages of MNOK 4.278.0 (4.756) combined. 80.9% of the mortgages are lent to customers in the Helgeland region. All the mortgages have floating interest rates, and 21 (21) % of the lending volume are flexi loans.

In anticipation of rating the company withheld transfer of prepared loans, and the loan portfolio is therefore reduced by MNOK 478.0 the past 12 months.

Loans that are eligible in the cover pool constitutes MNOK 4,214.9. The Portfolio is considered as good. When calculating overcollateralization, bank deposits of MNOK 234.4 (274.1) are included, in addition to the loan portfolio.

**Funding**

The lending portfolio is funded by issuing MNOK 3,618.5 (4,310.7) of covered bonds, as well as long term credit from Helgeland Sparebank. Covered bonds at the face value of MNOK 400 (900) are in the parent bank's ownership.

The value of the cover pool is well above the volume of borrowing and there is good security in the portfolio. The cover pool ratio of fullness per 31.03.14 was 23 (16) %.

**Risk conditions and capital ratio**

Laws and regulations for companies with concessions to issue covered bonds instruct that the risk levels should be low. The company has established guidelines and frames for governing and control of different forms of risk. There is a corporate agreement between Helgeland Boligkreditt AS and Helgeland Sparebank that ensures and maintains frames, proxies, capital management, and risk conditions.

The Board of Directors considers the company's combined risk as low.

**Credit risk**

The company's credit strategy is approved by the Board of Directors and determines frames for steering goals and risk profile. Lending in the cover pool fulfils the requirements of the financial services act, and is safeguarded with collateral in real estate within 75% of prudent market value. The company has had no individual write downs or established losses. Sum group write-downs on lending constitute MNOK 4.1, or 0.1% of gross lending. The Board of Directors considers the quality of the lending portfolio as very good. A potential fall in housing prices will reduce the net value of the cover pool. Quarterly stress tests are therefore conducted to calculate the effects of a potentially negative development in the housing prices. The Board of Directors considers the results

of conducted stress tests as satisfactory. The credit risk in the lending portfolio is considered to be low.

LTV (Loan to value) per 31.03.14 was 53 (53) %. The diagram below shows the debt to asset ratio for the loans that are in the mortgage company.

#### Liquidity risk

Liquidity risk is the risk that the company cannot meet its payment obligations. The Board of Directors annually determines the frames for risk management in the company. This includes determining frames for management of liquidity risk, organization and responsibility, stress tests, routines for monitoring the use of frames and compliance with guidelines, Board- and management reporting as well as independent control of systems for governing and control.

Helgeland Boligkreditt AS has established committed credit lines with the parent bank that guarantees payment of bond obligations over the next 12 months on a revolving basis. The company further seeks to reduce the liquidity risk in relation to larger loan maturities by repurchasing its own bonds. The company's liquidity risk is considered to be low.

#### Operation risk

The transfer- and service agreement between Helgeland Boligkreditt AS and Helgeland Sparebank ensures and maintains the operational risk. The agreement covers i.a. administration, bank production and IT-management.

#### Capital ratio

The capital ratio per 31.03.14 was 16.76 (15.74) % and consists exclusively of a CET1 capital of MNOK 293.8. The standard formula is used to calculate the capital requirements, and the basic indicator approach is used to calculate operational risk.

#### Prospects ahead

The company can show to a good result so far in 2014, with stable income and low risk, and we expect this to be the situation ahead. Helgeland Boligkreditt AS is planning to acquire additional loans from Helgeland Sparebank in 2014.

Mo i Rana, 29 April 2014

## NOTES

### NOTE 1. ACCOUNTING PRINCIPLES

#### General background

Helgeland Boligkreditt AS received its license as finance company February 2009. The company is a wholly-owned subsidiary of Helgeland Sparebank and was established to be the parent bank's enterprise for issuance of covered bonds. The company is headquartered in Mo i Rana, with address Jernbanegata 8601 Mo i Rana, Norway.

#### Presentation currency

All amounts are stated in NOK thousand unless otherwise specified. Presentation currency and functional currency are both NOK.

#### Basis of preparation of financial statements

The accounts have been prepared in accordance to Ministry of Finance's regulations on annual accounting for banks, etc., § 1-5 Simplified use of international accounting standards. The company is a part of the Helgeland Sparebank Group, who implemented IFRS in the consolidated accounts from 1 January 2005. The company uses the same principles of measurement, classification and presentation as the consolidated accounts for Helgeland Sparebank. The annual accounts have been prepared on a going concern basis.

#### Presentation in the balance sheet and profit and loss account

##### Loans

Loans are recognised in the balance sheet depending on the counterparty, either as loans to and deposits with credit institutions or as loans to customers, depending on the measurement principle.

Interest income on loans is included in the line for "net interest income".

Changes in value that can be linked to identify objective evidence of impairment on the balance-sheet date for loans carried at amortised cost and for the portfolios of loans at fixed interest rates that are carried at fair value are included in "write-downs of loans and guarantees".

##### Liabilities to credit institutions and deposits from customers

Liabilities to financial institutions are recognised as liabilities to credit institutions regardless of the measurement principle.

Interest expense on the instruments is included in net interest income based on the internal rate of return method. Other changes in value are included in "net gains on financial instruments at fair value".

#### Segment reporting

The company's operations involve only one strategic business area, which is organised and managed on a total basis. The company's business area is the retail market. Lending to the corporate market is mortgages to sole proprietorships and represents a smaller share of total lending. The company does not report this as a separate segment.

#### Financial instruments

The company defines its financial assets and liabilities within the following classes:

- Financial derivatives
- Securities issued and subordinated loan capital
  - Securities issued at floating rates of interest
  - Securities issued, fixed-interest
  - Securities issued, hedges
- Loans to customers
  - Loans at floating rates of interest

Financial instruments are valued in accordance with IAS 39. All purchases and sales of financial instruments are recognised in the accounts at the transaction date.

##### Financial derivatives

The agreements entered into by the company are derivatives related to interest rates and exchange rates. Interest swaps are related to fixed-interest deposits and loans; currency swaps are related to syndicate borrowing in euro.

Derivatives are carried at fair value (clean value) and are together with accrued/earned interest value in the balance sheet (see also section on hedge accounting). The effect of change in fair value is recognized as "gain/loss on financial instruments".

Interest on derivatives hedging is a part of the net interest rate.

## NOTES

Fair value is equal to the market price for listed securities. For securities that are not listed and which there is no market for, uses the company valuation techniques to determine fair values. The derivatives are recognised in the profit and loss account as an asset when the fair value is positive, and as a liability when the fair value is negative

### Securities issued

Securities issued are defined as securities which the company does not intend to trade and which were originally issued by the company. Buy-backs of own bonds in connection with debt reduction are netted against bond debt.

Liabilities at floating rates of interest are assessed at fair value when they are first included in the accounts and later at amortised cost through the use of the effective interest method. Any premium/discount is accrued over the term to maturity. The liabilities are shown in the balance sheet at amortised cost (including accrued interest). Changes in value for amortised cost are recognised in the profit and loss account and net interest.

Liabilities at fixed rates of interest are assessed at fair value. The liabilities are shown in the balance sheet at fair value (clean price) including accrued interest, less own portfolio. Changes in value are recognised in the profit and loss account as "gains/losses on financial instruments" and interest expense in the profit and loss account against net interest.

Appreciation at fair value over the result is expected to significantly reduce the result volatility that otherwise would have occurred when the company have signed interest rate derivatives to achieve efficient floating rate

Hedge accounting; the company evaluates and documents the hedge effectiveness, both at the initial classification and on an ongoing basis. At value hedging, both the hedging instrument and the hedged item are recognized at fair value, and changes in these values from the opening balance are recognized.

The company has no cash-flow hedges.

The fair value is calculated by discounting the cash flow. Credit spreads on interest-bearing securities are changed on the basis of an all-round assessment in which observed trades in the market, credit margin reports from various securities houses, and internal assessments are included as a basis for the overall assessment. A change in credit spreads will influence the required rate of return, as the supplement added to the zero coupon curve is changed. In the case of purchase of own securities, liabilities are reduced, and the difference between book value and the payment made (premium or discount) is recognised in the profit and loss account as a gain or loss relating to securities issued.

### Loans to customers

The company has defined its market area (Helgeland) as one segment.

Loans at floating rates of interest are measured at amortised cost in compliance with IAS 39. The amortised cost is the purchase cost less repayments on capital, plus or minus cumulative amortisation resulting from an effective interest method, less any amount for impairment. Loans at amortised cost, including accrued interest, reflect the value in the balance sheet. Interest income on loans to customers is recognised as income under net interest. When loans are first recognised in the balance sheet, they are valued at fair value.

### Write-downs on loans

A loan or a group of loans is written down when there is objective evidence of impairment of value as a result of loss events which can be reliably estimated, and which are important for the expected future cash flows from the loan or group of loans.

Loans are written down individually when there is objective evidence of the loan's impairment of value. The amount of the write-down is calculated as the difference between the book and present value of future cash flows calculated according to the expected life of the loan in question. The discounting is done through the use of the effective interest method. Calculated loss is shown on a gross basis in the balance sheet as an individual write-down on loans and is recognised in the profit and loss account as a loss cost. Loans which have been written down individually are not included in the basis for collective write-downs.

Loans are written down collectively when there is objective evidence suggesting impairment of a group of loans. Customers are classified in risk groups on the basis of different parameters such as financial strength, revenue generation, liquidity and funding, business sector, geographical location and behavioural score. These factors provide indications of debtors' ability to service their loans, and are relevant for the calculation of future cash flows from the different risk groups. Each individual risk group is assessed collectively with regard to the need for write-downs.

### **Interest income and interest cost**

Interest income and interest costs relating to assets and liabilities measured at amortised cost are recognised in the profit and loss account on an ongoing basis through the use of the effective interest method.

Interest income on loans which have been written down is calculated by using the same effective rate of interest as the one applied when discounting the original cash flow. Interest income on fixed-interest loans is recognised at fair value. Changes in the fair value of fixed-interest loans are recognised in the profit and loss account as a change in the value of financial instruments.

## NOTES

### Commission income and expenses

In general, commission income and expenses are accrued as a service is provided.

### Cash and cash equivalents

In the cash flow statement, cash and cash equivalents are defined as cash, deposits with Norges Bank and other banks, certificates, bonds and loans and credits provided for other banks. Cash equivalents are short-term liquid funds, which can be converted into cash within 3 months

### Provisions

Provisions are included in the accounts when the company has a currently valid obligation (legal or assumed) as a result of events, which have occurred, and when it is more likely than not that a financial settlement as a result of the obligation will take place, and when the size of the amount involved can be reliably estimated.

Provisions are reviewed on each balance sheet date in question, the level reflecting the best estimate of the obligation. When the effect of time is insignificant, the provisions will be equal to the amount of the cost required in order to be free of the obligation. When the effect of time is significant, the provisions will be equal to the present value of the future cash payments needed to meet the obligation.

In cases where there are several obligations of the same kind, the likelihood of the obligation resulting in a settlement is determined by assessing the group as a whole. Provisions for the company are included in the accounts even if the likelihood of a settlement relating to the company's individual elements may be low.

### Tax

Deferred tax is calculated on all temporary differences between accounts-related and tax-related balance sheet values according to the currently applicable tax rate at the end of the period (the liabilities method). Tax-increasing temporary differences include a deferred tax liability, and tax-reducing, temporary differences, together with any loss to be carried forward, include a possible deferred tax benefit. Deferred tax benefit is shown in the balance sheet when it is likely that in the future there will be taxable income against which the deferred tax benefit can be used.

The tax cost in the profit and loss account comprises both the period's payable tax and any change in deferred tax. The change in deferred tax reflects future payable taxes which are incurred as a result of the operations during the year.

### Cash flow statement

The cash flow statement shows cash flows classified by sources and fields of application.

### Share capital

Provision for dividends and group contributions are classified as equity capital in the period until the dividend is decided by the company's supervisory board. Provisions are not included in the calculation of capital adequacy. When the dividend or group contribution is decided by the General Assembly, it will be removed from the equity capital and classified as short-term liability until payment is made.

## NOTE 2. SEGMENT

The company's operations include only one strategic area of business, which is organised and managed. The company's business area is personal customer retail market. Lending to corporate retail market is represented by mortgaged loans to sole proprietorships and is a small share of total lending. Geographical segment is the region of Helgeland.
