Annual Report 2023

Highlights

Bustadkreditt Sogn og Fjordane AS (BSF) is a wholly-owned subsidiary of Sparebanken Sogn og Fjordane, based at the bank's head office in Førde.

Bustadkreditt Sogn og Fjordane AS has given the Sparebanken Sogn og Fjordane group access to long-term funding on competitive terms. It finances itself by issuing covered bonds. Services such as customer care, loan servicing, management and administrative services are supplied by Sparebanken Sogn og Fjordane.

At the start of the second quarter of 2023, it was announced that Sparebanken Sogn og Fjordane will become part of the SpareBank 1 alliance. This will also lead to a strategic change of direction for Bustadkreditt Sogn og Fjordane. In the future, the parent company will transfer its loans to the jointly owned company SpareBank 1 Boligkreditt, while gradually scaling back its use of BSF. The Company will continue to fulfil all of its ongoing obligations.

At the end of 2023, the Company had 15,787 mortgages with a total face value of NOK 25.1 billion. The loans in the cover pool were issued by Sparebanken Sogn og Fjordane and subsequently bought by Bustadkreditt Sogn og Fjordane AS. At the end of the year, all of the loans were variable rate loans. 14.3% of the loan book was made up of flexible mortgages.

The weighted average loan-to-value ratio was 56.7%, the weighted average loan term was 19.3 years and the weighted average time since the loans were granted was 3.8 years. The average loan per customer was NOK 1.59 million. The Company's total loan portfolio fell by NOK 2.3 billion over the past year, which reflects our adaptation to the Sparebanken Sogn og Fjordane Group becoming part of the SpareBank 1 alliance. The volume of covered bonds issued by the Company was NOK 20.9 billion.

The geographic distribution of our mortgage portfolio, based on the addresses of the borrowers, was as follows:

5 BIGGEST COUNTIES MEASURED BY LOAN VOLUME

County	Percentage
Vestland	73.4%
Oslo	10.3%
Viken	9.0%
Møre og Romsdal	1.8%
Rogaland	1.4%
Rest of Norway	4.1%
Total	100%

Income statement

In 2023, the Company made an operating profit before loan impairment losses and tax of NOK 199 million. For the full year, the Company recognised a NOK 15.2 million charge for changes in expected credit losses.

Profit for the year after tax was NOK 143.4 million. In 2022, profit after tax was NOK 118.9 million. Total assets fell by NOK 2.5 billion over the past year, while net interest income increased by 8.9%.

Net interest income in 2023 amounted to NOK 208.5 million, which is equivalent to 0.76% of average total assets. The equivalent figure for 2022 was NOK 191.4 million in net interest income, which was 0.74% of average total assets.

In 2023, operating expenses were NOK 14.6 million, which was 6.8% of total operating income. Operating expenses in 2022 were NOK 12.2 million (7.1% of total operating income).

The Company has no employees, and it buys services from Sparebanken Sogn og Fjordane. All services are bought on market terms. The Company's biggest expense was the purchase of services from Sparebanken Sogn og Fjordane.

Expected credit losses and trends in assets in default

The Company follows Sparebanken Sogn og Fjordane's guidelines for assessing expected credit losses on loans, guarantees and undrawn credit facilities.

At the end of 2023, the Company had 25 loans that were more than 90 days past due, but no losses had been realised on them. In 2023, a NOK 15.2 million charge was recognised for impairment losses. The total loss allowance on the balance sheet was NOK 36.6 million at the end of the year, equivalent to 0.15% of gross outstanding loans. That is a significant increase compared with the previous year, with most of the increase being due to parameter changes resulting from the validation of the impairment model in the first quarter of 2023. For more details, see Note 13. Default levels are monitored carefully.

Balance sheet and capital adequacy

Total assets, which have fallen in line with the strategic decision to gradually transition to Sparebanken Sogn og Fjordane transferring its mortgage loans to SpareBank 1 Boligkreditt, amounted to NOK 25,807 million at 31 December 2023. That represents a decrease of NOK 2,521 million over the past year.

The Company borrows money from financial markets using covered bonds. In addition, the Company has good, long-term credit facilities with Sparebanken Sogn og Fjordane.

In 2023, it paid NOK 118 million in dividends to its parent company. This amount was equal to the Company's profit for 2022.

Equity at the close of the year 2023 was NOK 2,306 million. All of the Company's equity is core Tier 1 capital, and its core Tier 1 capital adequacy ratio was 22.22%. Capital adequacy has been calculated by measuring credit risk using the standardised approach and operational risk using the basic indicator approach.

The Board of Directors considers the Company's equity to be satisfactory and adequate in relation to its activities and operations.

International rating

In 2011, Bustadkreditt Sogn og Fjordane AS's covered bond programme was given a long-term rating of Aaa by the ratings agency Moody's, and the TPI Leeway was set at 2. At the end of 2023, the long-term rating was still Aaa, while the TPI Leeway was 4. In June 2023, Bustadkreditt Sogn og Fjordane AS was assigned an A1 issuer rating by Moodys.

Bustadkreditt Sogn og Fjordane plans to maintain the ratings of both the Company and its covered bond programme.

Guarantees and mortgages

The Company has not issued any kind of guarantees. Nor has it issued any collateral, except residential mortgages and the substitute assets in the cover pool. Residential mortgages and substitute assets are collateral for the covered bonds.

Risk

Under its licence as a credit provider, BSF is subject to laws, regulations and rules that limit the level of risk to which it can be exposed. The Board of Directors and CEO are responsible for establishing risk management procedures, and for ensuring that they are adequate and in compliance with laws and regulations.

BSF is exposed to credit risk, operational risk, liquidity risk and market risk. Credit risk is the most significant of these. Limits have been set on exposure to the various classes of risk. The Board considers it a priority for the Company to maintain a low risk exposure.

Credit risk

Credit risk is the danger of losing money as a result of customers or counterparties being unable or unwilling to meet their obligations to Bustadkreditt Sogn og Fjordane AS.

The Company has its own rules on which loans it can buy from its parent company. The rules are strict, which means that in principle the credit risk is low. The rules specify requirements relating to the type of loan, loan-to-value ratio, risk class and type of collateral. At the end of 2023, the Company's average loan-to-value ratio was 56.7%, based on the approved valuations of the collateral established by Eiendomsverdi AS.

The Board of Directors considers the loan portfolio to be of high quality, and to be associated with a low credit risk.

The figure below shows the weighted loan-to-value ratio for the loans held by the Company.

Weighted loan-to-value ratio

Market risk

Market risk is the risk arising from the Company's open positions relating to loans and financial instruments whose values fluctuate over time in response to changes in market prices. BSF does not have any investments in shares or foreign currencies, so all of its market risk is related to interest rate risk. The Company's risk management framework sets limits on the Company's exposure to market risk. The Board considers it a priority for the Company to maintain a low exposure to market risk.

Liquidity risk

Liquidity risk is the risk that the Company will be unable to fulfil its obligations, or finance an increase in assets, without significant additional cost, either because it has to realise losses on the sale of assets or because it has to make use of unusually expensive financing. The Company has good credit facilities with its parent company which reduce its liquidity risk.

The Board has decided that the Company should maintain a low exposure to liquidity risk. This is, amongst other things, reflected in the size of the required liquidity buffer.

Operational risk

Operational risk is defined as the risk of losses due to human error, external actions or failures and defects in the Company's systems, procedures and processes.

BSF has signed an agreement with Sparebanken Sogn og Fjordane on the provision of services in areas such as customer service and anti-corruption controls, administration, IT, finance and risk management. In these areas, the parent company is responsible for resolving any mistakes, and it handles the operational risk. The Board believes that it handles this area well. The risk management department is responsible for assessing whether the Company has an adequate first line of defence.

Laws and regulations set out specific requirements relating to various records that have to be kept. Establishing and monitoring these records helps the Board and CEO to uncover errors or inadequacies in the running of the Company.

Internal controls also play a very important role in reducing the Company's operational risk. We consider the control activities and the system for risk assessment and internal control to be comprehensive and good in relation to the size and complexity of BSF's operations.

The Board of Directors considers the level of operational risk at BSF to be low.

Equal opportunity and discrimination

The Board of Directors consists of three men and two women. The CEO is a woman. The Board of Directors and management believe, like the rest of the bank, in proactively promoting equal opportunity and preventing discrimination at the workplace.

Corporate governance

Bustadkreditt Sogn og Fjordane AS's corporate governance principles are based on the Norwegian Code of Practice for Corporate Governance, as drawn up by the Norwegian Corporate Governance Board - NUES.

The AGM is the Company's highest decision-making body. Amongst other things, the AGM elects the Board of Directors and auditor, and monitors the Board and CEO's management of the Company.

The election of the Board is governed by Section 3 of the articles of association. Board members are elected for a two-year term. The Board is responsible for ensuring that the Company is managed and governed in accordance with laws, regulations, the articles of association and specific guidelines adopted by the AGM.

The Board of Directors is made up of four members from within the Group and one external member. Four board meetings were held during 2023. The Board has drawn up an annual plan for its activities, and one of its main priorities is ensuring that the Board members have sufficient knowledge and expertise between them.

The CEO is responsible for the management of the Company, and must follow the guidelines and rules laid down by the Board. The Company must be managed in accordance with the regulatory framework provided by laws, regulations, the Financial Supervisory Authority of Norway's circulars, government rules and the Company's articles of association.

Over the course of the year numerous reports enable the CEO to follow developments in the Company's various areas of risk. These reports are produced on a daily, monthly or quarterly basis, and provide the necessary information for managing risks and implementing any required risk-reduction measures. The reports are also sent to the Board for review. Once a year, the CEO prepares an overall assessment of risks and internal controls, which is presented to the Board.

Internal controls comply with the Norwegian Internal Control Regulations. All of the reporting units within the Group, including BSF, are responsible for having effective and appropriate internal controls to deal with their own risks. Units must assess risk levels prior to and after risk-reduction measures. They must then evaluate what internal controls are required to deal with the residual risk, and ensure that this risk is managed and monitored in a satisfactory manner.

The Company's internal auditor (PwC) also produces an independent report on internal controls each year. The monitor (KPMG) and external auditor (Deloitte) are two other important elements of the Company's control mechanisms. The scope of control mechanisms and oversight bodies makes it likely that any errors, defects or risks will be discovered, reported and corrected.

The Company has taken out liability insurance for the Board and CEO, through a joint scheme that the Sparebanken Sogn og Fjordane Group is a part of together with several other financial institutions. For all of the people who are insured through the scheme, the insured amount is up to NOK 120 million per event and in total.

Administration and management

BSF has an agreement with Sparebanken Sogn og Fjordane setting out the terms on which loans are purchased, transferred and serviced. Tasks are carried out by employees at Sparebanken Sogn og Fjordane. The CEO is employed by Sparebanken Sogn og Fjordane and seconded to Bustadkreditt Sogn og Fjordane.

Internal controls and financial reporting

As part of its internal controls, BSF's management must also assess whether the Company's activities create a risk of inaccurate financial reporting.

Processes and internal control procedures have been established to quality assure financial reporting. These include rules on authorisation, the allocation of responsibilities, reconciliation, IT controls, etc. Financial reporting must at all times also satisfy external laws and regulations. Sparebanken Sogn og Fjordane's CFO is responsible for the Group's accounting and finance function, which includes overall responsibility for compliance with external legislation throughout the Group. The Group's senior management team also continuously monitors the financial results of the various business areas and subsidiaries.

The Board oversees financial reporting and internal controls and makes sure that they operate effectively. The annual financial statements are finally approved by the AGM, after they have been reviewed by the Board.

Each year the external auditor produces a report summarising the results of the financial audit. The report also includes information about any weaknesses and defects, as well as suggested corrective measures.

Employees and working environment

The Company has no employees. As a result, no special measures have been implemented to improve the working environment.

BSF buys services from its parent company Sparebanken Sogn og Fjordane. The parent company is certified as an Eco-Lighthouse. No inputs or production methods are used that directly pollute the environment. For more details, see Sparebanken Sogn og Fjordane's annual report.

Corporate social responsibility

Please refer to Sparebanken Sogn og Fjordane's annual report, which sets out how the Group, including Bustadkreditt Sogn og Fjordane, meets its corporate social responsibility. This information can also be found at www.ssf.no/berekraft.

Review of the annual financial statements

The income statement, balance sheet and notes provide sufficient information about the Company's operations and financial position at 31 December 2023. The Board confirms that the going concern assumption has been used in the preparation of the financial statements for 2023.

Post balance sheet events

The Board is not aware of any events after 31 December 2023 that have a material impact on the financial statements as presented.

Summary

The Company produced strong results and its operations were stable at the end of 2023. The Company's net interest income reached NOK 208.5 million, an increase of 8.9%. Gross loans fell over the past year, and this reflects our adaptation to the Sparebanken Sogn og Fjordane Group becoming part of the SpareBank 1 alliance.

The Company, which has a strong capital position, its costs firmly under control and no realised losses, will continue to meet all of its obligations in the future.

Allocation of profit for the year

BSF made a profit after tax of NOK 143.4 million. The Board recommends that NOK 143.0 million be paid in dividends to the parent company. The remainder of the profit, NOK 0.4 million, will be transferred to other equity. This high dividend is considered justified in view of BSF's strong capital position.

Notes to the financial statements

Note 1 Accounting principles

GENERAL

Bustadkreditt Sogn og Fjordane AS is a wholly-owned subsidiary of Sparebanken Sogn og Fjordane, The Company was established to issue covered bonds on behalf of the bank. Bustadkreditt Sogn og Fjordane AS was founded in 2009 and has its head office in Førde.

The 2023 financial statements for Bustadkreditt Sogn og Fjordane AS were discussed and adopted at the Board meeting of 12 February 2024.

All amounts in the accounts and notes are given in thousands of NOK unless otherwise stated.

ACCOUNTING STANDARDS APPLIED

The financial statements have been prepared in accordance with the international accounting standards (IFRS - International Financial Reporting Standards) approved by the EU.

CHANGES TO ACCOUNTING PRINCIPLES

In the event of fundamental accounting reforms/changes to accounting principles, the figures for previous years must be adjusted to allow accurate comparison. If items in the accounts are reclassified, comparative figures for previous periods shall be calculated and reported in the financial statements.

Under IAS 8, the Company must report any changes that it has implemented during the current accounting period and state what impact they have had on the annual financial statements.

AMENDMENTS TO STANDARDS AND INTERPRETATIONS APPROVED BY THE EU

IAS 1 Presentation of Financial Statements and Practice Statement 2 Making Materiality Judgements

Clarifies which accounting principles shall be disclosed in the annual financial statements. Materiality judgements relating to information about accounting policies shall be made in the same way as other materiality judgements. This is also clarified through the amendments to the "Practice Statement 2".

The amendments are designed to help preparers of financial statements to decide which accounting policies the entity must disclose in its annual financial statements. There is now a requirement to provide information about material accounting policies, as opposed to significant accounting policies previously. Explanations have been added setting out how entities can identify material accounting policies. An accounting policy may be material if users of the financial statements would need information about the policy to understand other material information in the financial statements. The amendment stresses that if the notes include information about immaterial accounting policies, this shall not obscure the material accounting policies from readers. Material accounting policies must therefore be presented clearly and in such a way that they are evident to readers.

There were no other changes to standards and/or interpretations that were relevant to the Company in 2023.

ESTIMATES

When preparing the financial statements, certain estimates are made that affect reported amounts. Note 2 sets out significant estimates and assumptions in greater detail.

Assets and liabilities are included on the balance sheet from the date on which the Company achieves genuine control over the assets and/or takes on genuine liabilities.

Assets are taken off the balance sheet on the date on which genuine risk relating to the assets is transferred and the Company no longer has genuine control over the assets.

FINANCIAL INSTRUMENTS

A financial instrument is a contract that gives rise to a financial asset of one enterprise and a financial obligation or an equity instrument of another enterprise.

Classification and measurement under IFRS 9

Financial Instruments

Classification is based on whether the instruments are held within a business model whose object is both to collect the contractual cash flows and sell the instrument, and on whether the contractual cash flows are solely payments of principal and interest on fixed dates.

Financial assets are classified in one of the following categories:

- Debt instruments at amortised cost
- Debt instruments, derivatives and equity instruments at fair value through profit or loss (FVTPL)

Financial assets measured at amortised cost

The Company measures financial assets at amortised cost if the following criteria are met:

- The financial asset is part of a business model whose objective is to collect contractual cash flows, and
- The contractual terms of the financial asset give rise to cash flows that solely consist of payments of principal and interest on fixed dates

Subsequent valuations of financial assets measured at amortised cost are based on the effective interest rate method and the assets are tested for impairment. Gains and losses are recognised in the income statement if the asset is derecognised, modified or impaired.

The Company's assets at amortised cost include variable-rate loans to customers and deposits held at other banks.

Debt instruments, derivatives and equity instruments at fair value through profit or loss (FVTPL)

The following instruments are included in this measurement category:

- Derivatives measured at fair value through profit or loss
- Equity instruments, as a general rule
- Debt instruments with a business model whose objective involves collecting contractual cash flows from interest, fees and capital, as well as short-term trading of the instruments in the portfolio in order to make a profit, or with a business model that implies that the instruments are managed and evaluated on a fair value basis.

Bustadkreditt Sogn og Fjordane AS uses this category for commercial paper and bonds, fixed-rate loans to customers and derivatives. The interest rates on fixed-rate loans are generally hedged with derivatives that are measured at fair value. To avoid an accounting mismatch the fixed-rate loans are also measured at fair value.

Derecognition of financial assets

A financial asset is derecognised if:

- The contractual rights to the cash flows from the financial asset expire, or
- The Company has either transferred the contractual rights to the cash flows from the financial asset, or retained the rights to the cash flows from the asset while assuming an obligation to pay the cash flows received from the asset to another party; and either
 - a. The Company has transferred substantially all of the risks and rewards of ownership of the asset, or
 - b. The Company has neither transferred nor retained substantially all of the risks and rewards of ownership of the asset, but has transferred control of the asset

Financial liabilities

Financial liabilities are classified in one of the following categories:

- Financial liabilities measured at amortised cost
- Debt instruments, derivatives and equity instruments at fair value through profit or loss (FVTPL)

Financial liabilities at amortised cost

Bustadkreditt Sogn og Fjordane AS uses this category for liabilities to credit institutions, for the majority of the interest-bearing debt securities that it has issued and for other financial liabilities.

Debt instruments, derivatives and equity instruments at fair value through profit or loss (FVTPL)

The following instruments are included in this measurement category:

- Derivatives measured at fair value through profit or loss
- Equity instruments, as a general rule
- Debt instruments, if the criteria for the Fair Value Option (FVO) are met or the business model implies that the instruments are managed and evaluated on a fair value basis.

Bustadkreditt Sogn og Fjordane AS uses this category for derivatives.

Further details about financial liabilities

On initial recognition, financial liabilities are classified either as borrowings and other liabilities, or as derivatives designated as hedging instruments in an effective hedge. On initial recognition, derivatives are measured at fair value. Borrowings and other liabilities are measured at fair value adjusted for transaction costs that are directly attributable to them.

Derivatives are considered financial liabilities if their fair value is negative, and for accounting purposes they are treated in an equivalent manner to derivatives that are assets.

Borrowings and other liabilities

After initial recognition, interest-bearing loans are measured at amortised cost using the effective interest rate method. Gains and losses are recognised in the income statement when the liability is derecognised. Amortised cost is calculated by taking into account any transaction costs, and any costs and fees that are an integral part of the effective interest. Effective interest is presented in the income statement under interest expenses.

Other liabilities are measured at face value if the effect of discounting is immaterial.

Derecognition of financial liabilities

A financial liability is derecognised if the liability is redeemed, cancelled or expires. If an existing financial liability is replaced by a new financial liability issued by the same lender on significantly different terms, or the terms of an existing liability are significantly modified, the original liability is derecognised and the new liability is recognised. The difference in the carrying amount is recognised in the income statement.

Estimating expected credit losses

The impairment model for financial instruments in IFRS 9 is based on the principle that provisions should be made for expected credit losses. That requires us to estimate future credit losses regardless of whether or not a financial asset is impaired.

The impairment model in IFRS 9 applies to financial assets that are debt instruments. It also covers undrawn credit facilities. See Note 11 for an explanation of the impairment model.

Recognition of losses

A loss shall be recognised (i.e. recorded against the customer) when all collateral has been sold and it is not expected that the bank will receive further payments with respect to the asset. The claim against the customer shall still be pursued after a loss has been recognised, unless an agreement to cancel the debt has been reached with the customer.

PRESENTATION ON THE BALANCE SHEET AND IN THE INCOME STATEMENT

Loans

Depending on the counterparty, loans are included on the balance sheet as either "Loans and advances to credit institutions", "Loans to customers measured at amortised cost" or "Loans to customers measured at fair value". To simplify the balance sheet, all loans to customers are presented jointly on a single line, with the breakdown by category being presented in a note to the financial statements.

Interest income from financial instruments classified as loans is included under "Net interest income" using the effective interest rate method. The effective interest rate method is described under "Amortised cost method".

Changes in the fair value of loans measured at amortised cost and loans measured at fair value are included under "Impairment loss". Any portion of the change in the value of fixed-rate loans attributable to changes in interest rate levels is included under "Net gains/losses on financial instruments". For a fuller explanation of the valuation principles for loans, refer to the paragraph headed "Impairment model" earlier in this note.

Commercial paper and bonds

Commercial paper and bonds are managed and evaluated within a business model whose objective involves collecting contractual cash flows from interest, fees and capital, as well as short-term trading of the instruments in the portfolio in order to make a profit.

Interest income and expenses on commercial paper and bonds are included under “Net interest income” using the effective interest rate method. This method is described in the paragraph on amortised cost.

Other changes in value are included under “Net gains/losses on financial instruments”.

Financial derivatives

A derivative is a financial instrument with the following characteristics:

- The value of the instrument changes as a result of changes to the interest rate, value or price of an underlying asset
- The instrument requires little or no initial investment
- The instrument is settled at a future date

Derivatives are initially recognised at their fair value on the date on which the contract was signed, and subsequently at fair value.

Financial derivatives are presented as an asset if they have a positive value and as a liability if they have a negative value. Assets and liabilities are offset against one another if the Company has a binding contract with its counterparty stating that they will be offset, and if the Company intends to sell the assets and redeem the liabilities at the same time.

Interest payments on financial derivatives are included under “Net interest income” using the effective interest rate method. This method is explained in the paragraph on amortised cost. Other changes in value are included under “Net gains/losses on financial instruments”.

Debt to credit institutions

Debt to credit institutions and customers is recorded, depending on the counterparty, as either “Debt to credit institutions”, “Customer deposits measured at amortised cost” or “Customer deposits measured at fair value”. Interest expenses on these instruments are included under “Net interest income” using the effective interest rate method. Other changes in value are included under “Net gains/losses on financial instruments”.

Debt securities in issue

Debt securities in issue include commercial paper and bonds, and they are measured either at amortised cost or at fair value through profit or loss. To simplify the balance sheet, all debt securities in issue are presented jointly on a single line, with a more detailed breakdown in a note to the financial statements.

Interest expenses on these instruments are included under “Net interest income” using the effect interest rate method. Other changes in value are included under “Net gains/losses on financial instruments”.

TAX EXPENSE

The tax expense stated in the income statement includes both tax payable on income and assets, and changes to deferred tax for the financial period. Deferred tax liabilities/assets are calculated as 22% of temporary differences that exist between accounting and taxable values at the close of the year. Deferred tax is calculated using the tax rates and regulations that apply on the balance sheet date, or that are likely to be adopted and will apply when the deferred tax asset is realised or the deferred tax liability becomes payable.

Deferred tax assets are included on the balance sheet on the assumption that the Company will have taxable profits in future years.

Tax payable and deferred tax are charged to equity if the tax relates to items that in the current or previous periods have been taken to equity.

ACCRUAL OF INTEREST AND FEES

Interest and commission are recognised in the income statement as they accrue as income or expenses. Arrangement fees for loans are included in the cash flow when calculating the amortised cost, and are taken to income under “Net interest income” using the effective interest rate method.

RECOGNITION OF INTEREST INCOME

Interest income is recognised in the income statement using the effective interest rate method. This involves taking arising nominal interest plus amortised set-up fees to income.

Interest income is calculated using the effective interest rate method both for balance sheet items measured at amortised cost and for ones measured at fair value through profit or loss. Interest income on impaired loans is calculated as the effective interest rate on the carrying value.

CASH FLOW STATEMENT

The cash flow statement shows cash flows grouped by source and area of use. Cash is defined as cash and receivables from central banks, and instant access deposits with credit institutions.

HEDGE ACCOUNTING

The Company uses hedge accounting for fixed-rate bonds and derivatives designed to protect against fluctuations in the value of the bonds in question.

The hedged items (the fixed-rate bonds) are measured at fair value through “Net gains/losses on financial instruments” and the hedging instruments (the derivatives) are measured at fair value through “Net gains/losses on financial instruments”.

Amongst other things, IFRS 9 requires the hedged item and the hedging instrument to be formally designated as such. There must be a close economic relationship between the hedged item and the hedging instrument, the hedged item must be reliably measurable and the hedge must be effective. If the hedge no longer fulfils the hedge effectiveness requirement, hedge accounting shall be discontinued and the resulting adjustment shall be amortised through profit or loss. The amortisation shall be based on the recalculated effective interest rate at the date amortisation begins.

Gains or losses on hedging instruments are recognised in the income statement under “Net gains/losses on financial instruments”. Gains or losses on hedged items are considered an adjustment to the carrying amount of the hedged item and are recognised in the income statement under “Net gains/losses on financial instruments”.

POST BALANCE SHEET EVENTS

Post balance sheet events shall be reported in accordance with IAS 10. Events that are not covered by the financial statements, but that are material to any evaluation of the company, shall be disclosed.

ADOPTED ACCOUNTING STANDARDS AND OTHER CHANGES THAT MAY AFFECT FUTURE FINANCIAL REPORTING

Relevant standards and interpretations that have been adopted prior to the presentation of the Company's financial statements, but that will be implemented at a later date, are listed below. The Company intends to implement the changes that are relevant as and when they come into force, provided that the EU approves them before the Company prepares its financial statements.

No changes have been adopted that will have a significant impact on the financial statements.

Note 2 Critical accounting estimates and judgements

Estimates and judgements are continuously reassessed, and are based on past experience and other factors, such as expectations of probable future events. The Company prepares estimates and makes assumptions about future developments. Accounting estimates produced on the basis of this rarely entirely correspond with what actually happens. Estimates that constitute a significant risk of changes to the carrying amount of assets and liabilities over the coming financial year are discussed below.

Fair value of financial derivatives and other financial instruments

For securities that are not listed and for which there is not an active market, the Group uses valuation techniques to determine their fair value. The Group makes its assessments and uses methods and assumptions that in so far as possible are based on market conditions on the balance sheet date.

Interest-bearing securities

To value bonds and commercial paper, we obtain valuations from Nordic Bond Pricing.

Interest rate derivatives

Interest rate derivatives are valued using discounted cash flows based on the swap rate at the reporting date.

Fixed-rate loans to customers

The value of fixed-rate loans is calculated as the net present value of their future cash flows. For fixed-rate loans we use a yield curve that is derived from the average interest rates on fixed-rate products offered by competing banks to represent the market rate.

Loss allowance

There is a detailed explanation of the loan impairment model under IFRS 9 in Note 11. The method for calculating expected credit losses (ECLs) is based on estimates of the probability of default (PD), loss given default (LGD) and exposure at default (EAD), for all loans and undrawn credit facilities. There are uncertainties associated with estimating ECLs, particularly in relation to the PD, but also to the LGD and EAD.

Uncertainties

Measuring expected credit losses is a complex process, and in the case of several of the assumptions used as inputs, the management must exercise its professional judgement.

For assets where a model is used to calculate ECLs, the main uncertainties relate to estimating PD, LGD and EAD. For assets in Stage 3, where expected credit losses are measured individually, judgement is involved in the assumptions used to estimate future cash flows and value collateral.

Other areas involving uncertainty include the choice of various future economic scenarios (including their weighting), assessing significant increases in credit risk and decisions relating to whether the criterion for default has been met.

Macroeconomic scenarios

ECLs should be calculated by weighting several macroeconomic scenarios. The Company has chosen three future macroeconomic scenarios: a base scenario with a 50% weighting, and one pessimistic and one optimistic scenario each with a 25% weighting. Expected credit losses are weighted based on the outcomes of the three scenarios.

The relationship between the macroeconomic parameters and the PD used to be based on a model developed by the Norwegian Computing Centre, which used future interest rates and unemployment to estimate future default rates for retail banking customers. Due to the unusual macroeconomic situation in which we find ourselves at the moment, the model is not sufficiently good at predicting the future probability of default. We have therefore used our best judgement to assess what is likely to happen to the probability of default over the coming five years, based on projections from Norges Bank's monetary policy report and Statistics Norway.

Note 15 contains more information about the various scenarios and how they affect impairment losses.

Note 3 Segments

The Company has one main segment. This segment consists of loans to retail customers and a small volume of loans to private businesses. All of the Company's loans have been bought from Sparebanken Sogn og Fjordane. The Company does not have any operations outside Norway. Customers with overseas addresses are classified as part of the Norwegian operations.

Note 4 Capital adequacy

EQUITY AND SUBORDINATED DEBT	31.12.23	31.12.22
Share capital and share premium account	2 150 000	2 150 000
Other equity	12 829	12 444
Equity	2 162 829	2 162 444
Other core capital	0	0
Deductions		
Valuation adjustment (prudent valuation rules)	- 577	- 376
Deferred tax assets	0	0
Net core capital	2 162 252	2 162 068
Core Tier 1 capital	2 162 252	2 162 068
Net supplementary capital	0	0
Net equity and subordinated debt	2 162 252	2 162 068
BASIS FOR CALCULATION		
Credit risk		
Institutions	72 350	56 765
Retail loans	146 172	275 632
Residential mortgage loans	8 610 539	9 572 531
Overdue advances	228 364	128 345
Covered bonds	25 701	10 143
Other advances	27 233	26 551
Total calculation basis for credit risk	9 110 360	10 069 967
Operational risk	398 898	389 812
CVA	219 732	53 163
Total calculation basis	9 728 990	10 512 942
Excess equity and subordinated debt	1 383 933	1 321 033
CAPITAL ADEQUACY		
Capital adequacy ratio	22,22 %	20,57 %
Core capital adequacy ratio	22,22 %	20,57 %
Core Tier 1 capital adequacy ratio	22,22 %	20,57 %
Unweighted core capital ratio	8,27 %	7,55 %

The capital adequacy ratio has been calculated using the new capital adequacy regulations (Basel II). The standardised approach has been used for credit risk and market risk, whilst the basic indicator approach has been used for operational risk.

There are three pillars to the Basel II regulations. Pillar 1 relates to minimum capital adequacy requirements, and builds on the previous regulations in Basel I. Pillar 2 relates to the institution's internal assessment of total capital requirements (ICAAP), whilst Pillar 3 covers disclosure requirements for financial information.

Note 5 Risk

Bustadkreditt Sogn og Fjordane AS (BSF) is exposed to credit risk, operational risk (including climate risk), liquidity risk and market risk. Credit risk is the most significant of these. Limits have been set on exposure to the various classes of risk. The Board considers it a priority for the Company to maintain a low risk exposure. The most important goals of the risk management strategy are to ensure: that the Company meets its goals and deals with risks that might prevent it from doing so; that internal and external reporting is of a high standard; and that the Company operates in keeping with internal guidelines and relevant legislation.

Credit risk

Bustadkreditt Sogn og Fjordane AS is exposed to credit risk through residential mortgages, and to counterparty risk through its investments in financial markets.

The loans that it purchases from Sparebanken Sogn og Fjordane have good collateral. At the time of purchase, the loan must represent no more than 80 percent of the approved value of the collateral. The values of properties used as collateral for residential mortgage loans at BSF are updated quarterly. Estimated values provided by Eiendomsverdi AS, used alone or in combination with valuations from surveyors or estate agents, determine the approved values for properties.

The first tranche of loans from Sparebanken Sogn og Fjordane was bought in March 2009. Since then, the market value of residential property has risen. Sparebanken Sogn og Fjordane services the loans held by BSF. The loans are performing well, and are closely monitored. The Company considers its loan portfolio to be low-risk.

The loans held by BSF are granted by Sparebanken Sogn og Fjordane, and the credit scoring of mortgage customers follows the credit scoring procedures of the parent company. Customers who apply for a mortgage are carefully assessed on the basis of the collateral, their ability to service the loan, their debt levels and the probability of default. Consideration is also given to the risks associated with factors such as the customer's situation in life, employment situation and education. Procedures have also been put in place for transferring loans to BSF, specifying the criteria that must be fulfilled by the loans in order for them to be moved to the Company. These criteria comply with all regulatory requirements. Furthermore, the bank has additional internal restrictions on which kinds of loans that can be transferred to the Company. Loans that are held by BSF are also monitored very carefully in relation to credit impairment. BSF also has risk management

procedures in place that have been approved by the Board, which set out the checks that must be made in order to minimise credit risk, and allocate responsibility for carrying out the checks and for reporting.

The performance of the loan portfolio is monitored monthly through a credit report which sets out areas such as the composition of the portfolio by risk group, loan performance and the impact of a fall in property prices and higher default rates on the cover pool.

The Company's counterparty risk derives from investments in financial markets and exposure to other financial institutions.

There are limits on BSF's exposure to any given counterparty. In order to protect itself against losses, BSF only has exposure to financially sound counterparties.

In accordance with the stipulations of IFRS 9, BSF makes an allowance for expected credit losses on all of its loans and other exposures. See Note 11 of the annual financial statements for a more detailed description of model-based and individually assessed impairment allowances. Normally, a loss is realised when all collateral has been sold and it is not expected that the Company will receive further payments with respect to the asset. The claim against the customer is still pursued unless an agreement to cancel the remaining debt has been reached with the customer.

Liquidity risk

Liquidity risk is the risk that BSF will be unable to meet its obligations when they fall due. The company's liquidity buffer shall be sufficient to allow it to meet all of its obligations when they fall due. The company always maintains the minimum liquidity buffer required by the Board and sufficient liquidity to cover its net obligations over the next six months.

Bustadkreditt Sogn og Fjordane AS shall maintain a low exposure to liquidity risk. That is important in order to maintain the confidence of financial markets and ensure acceptable funding costs. Without good liquidity, the Company would be more exposed to unfavourable and turbulent conditions in financial markets. It is important that the Company's liquidity position gives it the security and flexibility needed to allow it to borrow on competitive terms.

BSF's primary source of funding is covered bonds. In order to ensure access to a wide range of funding sources, BSF issues bonds with varying terms to

maturity, including both fixed and variable rate bonds. The rating of the Company's covered bond programme is important for ensuring access to funding and for keeping liquidity risk low.

The Company has credit facilities with its parent company that ensure good access to liquidity even during challenging market conditions. These credit facilities can be used to settle the purchase of mortgage loans from the parent company, to finance available credit within flexible mortgages, and to buy instruments that qualify for inclusion in the liquidity buffer.

Interest rate risk

The company shall manage its exposure to interest rate risk in order to minimise its exposure to interest rate fluctuations. There are limits on exposure to changes in the absolute level of interest rates, which are monitored and reported monthly. The Company uses interest rate swaps to manage its interest rate risk.

Spread risk

BSF has a portfolio of bonds that acts as a liquidity buffer. The portfolio is designed to qualify for inclusion in the Company's liquidity coverage ratio (LCR), which means it has low credit risk and is primarily made up of covered bonds issued by Norwegian institutions. These bonds have ratings from international rating agencies. BSF has rules governing the credit quality, concentration and term to maturity of its portfolio.

Operational risk

Operational risk is defined as the risk of losses due to weaknesses or defects in processes or systems, carried out by employees or third parties, arising from BSF's operations. A large part of the operational risk is dealt with through the service agreement between the parent company and BSF, which commits the parent company to supplying services to BSF. In the draft for the new SREP guidelines, many different kinds of risk are included under the heading operational risk. Below, we will concentrate on some of the most important kinds of operational risk: compliance risk, money laundering and terrorism financing risk, and ESG risk.

Compliance risk

Compliance risk is the risk that the Company will be fined or suffer economic losses due to failure to comply with laws, rules and industry standards.

The regulations covering Norwegian mortgage credit institutions are relatively limited in scope. The institutions must ensure that legislation governing the granting and monitoring of credit facilities is complied with for the loans they buy from their parent company. In the case of BSF,

this is done through the credit investigations and monitoring performed by the parent company, including audits by the internal auditor and on-site inspections by the Financial Supervisory Authority of Norway. BSF's independent monitor is also free to investigate the credit-worthiness of the loans on BSF's balance sheet if he so wishes.

In addition, the Financial Institutions Act regulates which types of loans can be included in the cover pool of Norwegian credit institutions. The rules are clear and straightforward, and the compliance risk is considered to be low. The independent inspector also checks compliance in this area. In addition, the risk management and compliance department further reduces the compliance risk through its checks and reviews of financial services legislation with the CEO.

Money laundering and terrorism financing risk

The financial services industry plays an important role in society's fight against money laundering and terrorism financing. BSF takes its responsibility seriously and is working to ensure good compliance with the regulations. In 2021, the Company was granted permission to consider the customer due diligence performed by Sparebanken Sogn og Fjordane in the area of money laundering as measures taken by BSF to combat money laundering. The work done by the parent company to reduce the risk of money laundering thus also determines the overall money laundering risk at BSF.

There are two main issues relating to the Company's lending activities that create a risk of terrorism financing and money laundering. When granting loans, there is a risk that the money is not being borrowed for the stated purpose, and that it is instead being used to finance terrorism. The loans on the balance sheet of BSF are granted by its parent company. However, if the terrorism financing occurs after BSF has bought the loan from its parent company, BSF will be the lender that is financing terrorist activities.

The risk of money laundering will be related to the loan agreement with the customers. There is a risk that the source of the money used to repay the loan is criminal activity. The principle of "Know your customer" (KYC), which also involves knowing the source of their funds, is therefore the building block for work on reducing the risk of both terrorism financing and money laundering. Risk assessments include an assessment of the risk associated with the product range offered by BSF (repayment loans and flexible mortgages to retail customers). The residual risk associated with these products is moderate after implementing the risk-reduction measures required by KYC regulations.

ESG risk

ESG risk covers risks relating to the climate and environment, social issues and corporate governance. The EU has created a classification system that defines the criteria for judging whether or not an economic activity can be considered sustainable. The aim is to establish a shared understanding of what is sustainable, and to avoid “greenwashing”.

Climate risk is currently the most important risk within ESG. Climate risk is the risk associated with climate change leading to an increase in the Bank’s risks and losses. Climate risk is usually split into three areas:

1. Physical risk: The risk that climate change will lead to temperature changes and more extreme weather events. This has the potential to reduce the value of assets, and thereby cause major financial losses to both the customers of banks and the banks themselves.
2. Transition risk: Risks associated with the transition to a net zero society. These include political, regulatory and technological factors that may affect demand for goods and services.
3. Liability risk: Companies may be held liable for damage from climate change caused by their decisions, or failure to take decisions. This applies to the bank, but also to the bank’s customers.

There is also a risk of loss of reputation if the financial services industry fails to live up to what is expected and required of it by the regulations governing the role of financial institutions in the battle against climate change. Here the ability of financial institutions to set appropriate sustainability requirements of their customers comes in, as well as the ability of individuals and businesses to comply with them.

BSF provides financing to individual customers with mortgages with strong collateral. Of the various forms of climate risk, physical risk and transition risk are the ones that could have some impact on its activities. Climate change could mean that the locations of some of the homes the Company has a mortgage over become more at risk of flooding, landslides or other natural disasters than is currently the case. The Company could incur losses from this if the values of the homes in these areas fall. It should be noted that in order for the Company to suffer losses, its customers must both default on their loans and live in an area where climate risk affects the value of their collateral. Default rates on mortgage loans are generally low. Moreover, most

mortgaged properties can lose quite a lot of value before the collateral value becomes lower than the value of the loan to the customer. Therefore, BSF is currently considered to have low exposure to rising credit risk as a result of potential climate change.

The transition risk is currently considered low based on the nature of BSF’s business. It cannot be ruled out that in the future there will be new rules on the energy rating system for homes that may reduce the value of collateral in BSF’s loan portfolio. However, no indication has been given that this will happen.

REPORTING

Bustadkreditt Sogn og Fjordane AS considers it a priority to report its risk exposure and capital position accurately and completely. It has therefore established various periodic reports for the Board to review, as well as reports that form part of the day-to-day running of the Company, which are designed to ensure compliance with current legislation and internal guidelines at all times. These reports keep Board members up-to-date on whether the Company is on target to achieve the goals that have been set for it, and whether risk exposure is within the established limits. Credit reports, finance reports and liquidity reports are prepared monthly, and are reviewed by the Board on a quarterly basis. The anti-money laundering report is reviewed by the Board quarterly. The same applies to various other accounting reports. In addition, there is a monthly report on loans in default and a daily report to show that lending volumes and the cover pool comply with current legislation and internal guidelines.

An ICAAP is performed and reported each year.

Internal control reports are produced annually. The internal control report is presented to the Board of BSF, and also constitutes part of the overall internal control report for the Group. The report includes an assessment of, and comments on, internal controls at the Company, a review of all important areas of risk, an assessment of compliance with legislation and proposals for improvements.

Each year the internal auditor performs an independent review of the Company’s internal controls, which is presented to the Board, as are the independent inspector’s quarterly reports.

In its capital adequacy reporting, BSF uses the standardised approach for credit risk and the basic indicator approach for operational risk.

Note 6 Risk classification of loans to customers

The bank's PD models predict the likelihood of customers going into default over the coming 12 months. More information about the models can be found in Note 11. The Bank uses the models to classify all of its loans monthly, in the risk classes A-K, with A being the lowest risk class and K being loans in default. Based on that, it places its customers in three main groups: Low risk (PD of A to D), medium risk (E-G) and high risk (H-K).

Risk class	Probability of default (PD)					
	from	up to				
A	0,00 %	0,10 %				
B	0,10 %	0,25 %				
C	0,25 %	0,50 %				
D	0,50 %	0,75 %				
E	0,75 %	1,25 %				
F	1,25 %	2,00 %				
G	2,00 %	3,00 %				
H	3,00 %	5,00 %				
I	5,00 %	8,00 %				
J	8,00 %	100,00 %				
K	100,00 %	100,00 %				

	Gross loans		Guarantees and undrawn credit facilities		Loss allowances	
	2023	2022	2023	2022	2023	2022
Low risk (A-D)	18 663 765	20 334 486	2 098 720	1 969 329	4 495	2 978
Medium risk (E-G)	5 375 816	6 547 412	96 862	83 576	8 967	6 421
High risk (H-K)	1 088 159	1 056 204	3 649	3 777	23 418	12 330
Total	25 127 741	27 938 103	2 199 231	2 056 683	36 880	21 729

Note 7 Loans in default and debt relief

Payment default

Assets are considered past due when at least one of the customer's accounts is overdue or overdrawn by at least NOK 1,000. The number of days that a customer is considered to have been in payment default is determined by the account that has been past due for longest.

	Gross loans		Guarantees and undrawn credit facilities		Loss allowance	
	31.12.23	31.12.22	31.12.23	31.12.22	31.12.23	31.12.22
11-30 days past due	24 931	29 244	0	0	476	242
31-90 days past due	17 921	24 823	0	0	465	551
More than 90 days past due	42 432	13 995	0	0	2 376	1 708
Total assets more than 10 days past due	85 284	68 062	0	0	3 317	2 501

Assets in default

An asset is considered in default or at risk of default if one or more of the following criteria apply:

- At least one of the customer's accounts is more than 90 days past due and the amount overdue is material
- An individually assessed allowance has been made for the customer
- A loss has been realised in relation to the customer
- One or more of the following external indicators applies to the customer:
 - Debt restructuring
 - Insolvency/Bankruptcy

The threshold for considering overdue payments material has been set at NOK 1,000.

	Gross loans		Guarantees and undrawn credit facilities		Loss allowance	
	31.12.23	31.12.22	31.12.23	31.12.22	31.12.23	31.12.22
More than 90 days past due	42 432	13 995	0	0	2 376	1 708
Other assets in default	195 637	115 496	0	0	10 360	3 020
Total assets in default	238 068	129 491	0	0	12 736	4 728

Debt relief

Debt relief refers to changes to the agreed terms and conditions granted because a customer is in financial difficulties that would not have been granted if the customer were in a stronger financial position.

	Gross loans		Guarantees and undrawn credit facilities		Loss allowance	
	31.12.23	31.12.22	31.12.23	31.12.22	31.12.23	31.12.22
Assets with debt relief that are not in default	210 582	180 838	0	126	2 673	1 645
Assets with debt relief that are in default	91 976	49 268	0	0	4 989	1 953
Total assets with debt relief	302 558	230 106	0	126	7 662	3 598

Note 8 Loans by sector

	Gross loans		Guarantees and undrawn credit facilities		Loss allowances	
	2023	2022	2023	2022	2023	2022

Note 10 Loans by loan-to-value ratio

The table below shows the Company's assets by various ranges of loan-to-value ratio. The loan-to-value ratio is calculated as the value of the asset divided by the value of the properties used to secure the asset. Valuations by Eiendomsverdi AS are used to determine the values of the properties.

	Gross loans		Guarantees and undrawn credit facilities		Loss allowances	
	2023	2022	2023	2022	2023	2022
LTV ratio from 0% up to and including 40%	4 822 130	5 270 115	1 028 733	1 007 974	4 222	3 530

Note 11 Explanation of impairment model under IFRS 9

The Company has developed a model for calculating impairment losses that meets the requirements of IFRS 9. The model calculates the Expected Credit Loss (ECL) for all loan accounts, guarantees and undrawn credit facilities. The ECL is an unbiased estimate based on several future scenarios.

The model splits loans into three stages. Upon initial recognition, a loan is generally allocated to Stage 1. If the account's credit risk has increased significantly since initial recognition, it is moved to Stage 2. Assets in default are allocated to Stage 3, using the same definition of default as used for internal risk management, as stated in Note 7. An account shall always be allocated to the highest stage that it qualifies for.

For assets in Stage 1, expected credit losses are calculated for the coming 12 months, whereas for Stages 2 and 3, expected credit losses are calculated for the expected lifetime of the asset.

The ECL is calculated using parameters that estimate the exposure at default (EAD) and loss given default (LGD), as well as the probability of default (PD) for any given period.

Individually assessed allowances

As a general rule, the Company does not make individually assessed allowances for loans to the retail market. Nevertheless, as an exception to that rule, an individually assessed allowance can be made for individual high-value loans where the model-based impairment is considered too low.

Individually assessed allowances are determined by a probability-weighted calculation of various possible outcomes. Where an individually assessed allowance has been made, this takes precedence over the impairment calculated by the model. Individually assessed allowances are included in Stage 3.

Probability of default (PD)

The Company has, based on its own default data, developed models for estimating the likelihood of default over the coming 12 months (12-month PD). The likelihood that a customer will default on their obligations during the remaining term of the asset (the lifetime PD) is derived from the 12-month PD, using the assumption that in the long term the PD will migrate towards the average PD of the portfolio.

The Company has models for application scoring and behavioural scoring at the customer level. The application scoring models are used to estimate the PD when a customer applies for a loan or credit facility. The behavioural scoring models are used to estimate the PD for all existing assets at the end of each month.

Loss given default (LGD)

The LGD represents how much the Company expects to lose in the event of a default, and it incorporates the following components:

- The likelihood that an asset in default will be cured
- The projected collateral ratio for the exposure
- The expected recovery rate for the unsecured part of an exposure
- External costs associated with debt recovery

A floor is also set for losses if the account is not cured. At 31.12.2023, this floor was set at 1%. An account is considered cured if it was in default and is closed without any losses being realised.

When calculating the collateral ratio, the expected sales value of the underlying collateral is used. For residential and commercial properties, the sales value is set at 50% of the estimated value. The projected sales values are based on three future scenarios for house prices.

Exposure at default (EAD)

The EAD represents the expected credit exposure to the customer at the time of default. For loans with a contractual loan repayment schedule, that schedule is used as a basis for determining the EAD. An adjustment is made to take into account the likelihood of the customer repaying the loan more quickly than is stipulated by the loan repayment schedule. This includes the likelihood of the customer paying off the loan completely before the maturity date. For credit facilities, it is assumed that the whole credit limit has been drawn at the time of default.

Expected life

For loans and advances in Stage 2, the ECL shall be calculated for the remaining expected life of the asset. For loans and advances with a contractual term, this is the remaining term to maturity at the reporting date. For undrawn credit facilities, the expected life is based on the average observed life of discontinued credit facilities.

Significant increase in credit risk

Transfers from Stage 1 to Stage 2 are governed by the definition of a significant increase in credit risk. The Company itself is responsible for defining what constitutes a significant increase in credit risk. There are three elements to how it does this: a quantitative element, a qualitative element and a back stop. The quantitative element is the main driver of transfers from Stage 1 to Stage 2.

Quantitative element: An asset is considered to have experienced a significant increase in credit risk if the PD on the reporting date is at least twice as high as the expected PD calculated at the recognition date, and the change in PD is at least 0.5 percentage points.

Qualitative element: If the customer has been given debt relief on at least one loan, or if the customer is on the Company's watch list for customers with increased credit risk, all of the customer's accounts shall be transferred to Stage 2 if they don't qualify for Stage 3.

Back stop: If an account is more than 30 days past due, it shall be transferred to Stage 2 regardless of whether or not it meets the requirements of the quantitative and qualitative tests. If an account is more than 90 days past due, it shall be moved to Stage 3.

In its inspection reports, the Financial Supervisory Authority of Norway has pointed out that basing transfers to Stage 2 on absolute limits for changes in the PD in reality amounts to making use of the low credit risk exemption in IFRS 9, and that banks must ensure that the limit does not prevent timely identification of loans where the risk has risen.

The Company reduced the absolute limit from 0.75 percentage points to 0.5 percentage points in 2023. At 31.12.2023, removing the limit would have increased impairments by NOK 0.9 million. The Company considers that the limit does not have a material impact on estimated losses and helps to reduce the volatility of transfers between stages 1 and 2 between accounting periods.

Transfer to lower stages

An account in Stage 2 can be transferred back to Stage 1 if it no longer meets any of the three criteria described above. If a loan has been on the Company's watch list, it must complete a three month probation period before it can be moved to Stage 1.

Assets that are in default will be transferred from Stage 3 to Stage 1 or 2 when they are no longer identified as in default, and once they have completed a three month probation period without any further default events.

In the case of customers who have been considered in default on account of receiving debt relief on two or more occasions during a two-year period, or who become overdrawn/more than 30 days past due in the two-year period after receiving debt relief, there is a probation period of 12 months.

Derecognition of loans

A loan is shown as being derecognised if it has been repaid and the loan account has been closed. This applies both if the loan has been repaid by the customer and if it has been refinanced with our bank or another bank.

Makrosenario

As previously mentioned, the Company takes into account information about the future when estimating ECLs. This is done by incorporating three macro-economic scenarios into the calculation: a base scenario with a 50% weighting, and one pessimistic and one optimistic scenario each with a 25% weighting. ECLs are calculated based on the weighted outcomes of the three scenarios.

The relationship between the macroeconomic parameters and the PD used to be based on a model developed by the Norwegian Computing Centre, which used future interest rates and unemployment to estimate future default rates for retail banking customers. Due to the unusual macroeconomic situation we have been through, the model is not sufficiently good at predicting the probability of default over the next few years. We have therefore used our best judgement to assess what is likely to happen to the probability of default over the coming five years, based on projections from the monetary policy report and Statistics Norway.

All of the Company's assets are secured with a mortgage on a property, with the collateral values in the scenarios being projected based on the house price forecast in the monetary policy report.

As of the current time, no climate-related scenarios have been included when calculating expected losses.

More information about the macroeconomic scenarios can be found in Note 15.

Uncertainties

Measuring expected credit losses is a complex process, and when deciding on several of the assumptions used as inputs, the management must exercise its professional judgement.

For assets where a model is used to calculate ECLs, the main uncertainties relate to estimating PD, LGD and EAD, as well as to the rules on what constitutes a significant increase in credit risk (Stage 2) and decisions as to whether the criteria for individually assessing a loss allowance have been met. For individually assessed allowances, we have used our best judgement to determine the assumptions for future cash flows and the valuation of the collateral.

Other areas involving uncertainty include the choice of various future scenarios for PD and house prices, including their weighting. There is also great uncertainty surrounding future climate change and how it will affect losses on mortgage loans.

Corporate governance

The Company's procedures and guidelines establish a clear system for determining losses. This system gives different departments at the Company responsibility for different areas, such as developing and maintaining models, preparing macroeconomic scenarios, assessing scenarios and calculating expected credit losses.

Note 12 Assets classified by IFRS 9 stage

The change in the rules for transferring loans to Stage 2 that was introduced in the first quarter of 2023, whereby the absolute limit for changes in the PD was lowered from 0.75 to 0.5 percentage points, increased the volume of loans in Stage 2 by around NOK 990 million.

Note 13 Loss allowances classified by IFRS 9 stage

Upon initial recognition, a loan is generally allocated to Stage 1. If its credit risk has increased significantly since initial recognition, it is transferred to Stage 2. Assets in default are allocated to Stage 3. Where an individually assessed allowance has been made, this takes precedence over the impairment calculated by the model. In the table below, individually assessed allowances are included under Stage 3.

In the first quarter of 2023, changes were made to the loss allowances after validating the impairment model. The changes with the biggest impact on impairments relate to how the collateral coverage ratio is calculated and to the cure rate for loans in default. A change has also been made to the rules for transferring loans to Stage 2, whereby the absolute limit for changes in the PD has been lowered from 0.75 to 0.5 percentage points. A loan is now moved to Stage 2 if its PD has increased by at least 100% from when it was originated and the increase in the PD is over 0.5 percentage points.

Losses realised during the period for which a loss allowance had not previously been made	0	0	0	0
Recoveries against previous years' realised losses	0	0	0	0
Impairment loss for the period	2 110	10 870	15 151	11 509

Note 15 Macroeconomic scenarios in the impairment model under IFRS 9

Under IFRS 9, impairment allowances shall take into account expectations for future defaults and credit losses. In 2018 a statistical model was introduced to estimate how expected changes in macroeconomic parameters will affect the future probability of default. Due to the unusual macroeconomic situation over the past few years, the model is not sufficiently good at predicting the future probability of default. A qualitative assessment has therefore been made of what is likely to happen to the probability of default and house prices over the next five years, based on forecasts in Norges Bank's monetary policy report.

Expected credit losses are calculated on the basis of three macroeconomic scenarios, with scenario 1 being the base scenario. In addition, there is an optimistic macroeconomic scenario (scenario 2) where the Norwegian economy performs better than expected, and a pessimistic macroeconomic scenario (scenario 3) where the Norwegian economy performs worse than expected.

The table below shows the future scenarios used to calculate expected credit losses at 31.12.23.

	Probability of default starting from 31.12.23					House prices	
	Year 1	Year 2	Year 3	Year 4	Year 5	Annual average growth	Weighting of scenario
Scenario 1: Base scenario	2,20	2,00	1,80	1,60	1,40	3,3 %	50 %
Scenario 2: Optimistic scenario	1,65	1,50	1,35	1,20	1,00	4,3 %	25 %
Scenario 3: Pessimistic scenario	2,75	2,50	2,25	2,00	1,80	0,5 %	25 %

Sensitivity analysis of changes to assumptions in impairment model under IFRS 9

The table below shows how sensitive the Company's profitability would be to changes in the qualitative parameters presented above. For example, if the probability of default in all of the scenarios had been put 10% higher across the whole 5 years, expected credit losses would have been NOK 2 million higher. This would reduce pre-tax profit by an equivalent amount. If expected annual house price growth had been set 2 percentage points higher, it would have increased profit by NOK 1.9 million.

	Change to parameter	Impact on pre-tax profit/loss
Probability of default compared with central assumption	- 50 %	11 016
	- 20 %	4 216
	- 10 %	2 081
	+ 10 %	- 2 029
	+ 20 %	- 4 008
	+ 50 %	- 9 681
Annual change in house prices	- 5 pp.	- 4 935
	- 2 pp.	- 1 958
	- 1 pp.	- 975
	+ 1 pp.	960
	+ 2 pp.	1 899
	+ 5 pp.	4 546

Note 15 Macroeconomic scenarios in the impairment model under IFRS 9 (cont.)

The table below shows the impact on pre-tax profit of giving a 100% weighting to each individual scenario. If the pessimistic scenario had been used as the only scenario, the Company's loss allowance would have been NOK 8.2 million higher and its pre-tax profit would have been reduced by an equivalent amount.

	Impact on pre-tax profit/loss
Scenario 1: Base macroeconomic scenario	749
Scenario 2: Optimistic macroeconomic scenario	6 732
Scenario 3: Pessimistic macroeconomic scenario	- 8 231

Note 16 Loans and advances to credit institutions

*) Overdraft/running account between Bustadkreditt Sogn og Fjordane AS and Sparebanken Sogn og Fjordane.

Note 17 Sensitivity analysis

Based on the balance sheet at 31.12.2023, any changes in market risk taking place over the coming year will have the following impact on profit and equity.

Impact on profit/equity

	INTEREST RATE	
	- 1,50 %	1,50 %
Loans and advances to credit institutions	- 2 244	2 244
Bonds and other fixed-interest securities	- 3 422	3 422
Loans to customers	- 245 881	245 881
Debt securities in issue	164 812	- 164 812
Financial derivatives	49 839	- 49 839
Debt to credit institutions	26 056	- 26 056
Total	- 10 839	10 839

This note sets out the impact on the financial statements over a period of 12 months of an immediate parallel change in interest rates of +1.5 percentage points and -1.5 percentage points. It takes into account the change in ongoing interest income and expenses, the one-off impacts that any such immediate change in interest rates would have on items measured at fair value and the impact of the change on profit in the remaining fixed interest term prior to the change impacting income and expenses. The Company uses hedge accounting in its financial statements.

Note 18 Liquidity risk

Undiscounted cash flows required to meet financial obligations

Bustadkreditt Sogn og Fjordane AS has no employees. An agreement has been signed with Sparebanken Sogn og Fjordane on the supply of loan servicing and administrative services. All of the Company's loans have been acquired from Sparebanken Sogn og Fjordane, and an agreement has been signed with the bank on the servicing of the portfolio. Bustadkreditt Sogn og Fjordane AS takes on all of the risk associated with the loans that it acquires from its parent. Bustadkreditt Sogn og Fjordane AS has been given access to good credit facilities with Sparebanken Sogn og Fjordane. These will allow it to make advances to customers with flexible mortgages, provide bridge financing when loans are being transferred, and fund the necessary surplus in the cover pool.

Further details of the credit facilities

Bustadkreditt Sogn og Fjordane AS (BSF) has four credit facilities with Sparebanken Sogn og Fjordane (SSF):

- A NOK 1,200 million credit facility to be used to settle the purchase of mortgage loans from SSF. This is a revolving credit facility with a 15-month notice period on the part of SSF. BSF can cancel or change the limit on the facility with SSF at 14 days' notice. At 31.12.2023, the amount drawn against the facility was NOK 0.533 million.
- A credit facility that can be used to finance advances to customers with available credit within their flexible mortgages. At 31.12.2023 the limit on the facility was NOK 2,199 million.
- A credit facility related to overcollateralisation. The facility shall only be used to buy loans for inclusion in the cover pool, and to buy instruments that qualify as part of a liquidity buffer. At 31.12.2023, the limit on the facility was NOK 1,675 million, but this limit depends on the volume of covered bonds issued at any given time.
- A long-term credit facility. The limit on the facility is NOK 1,000 million, which was fully drawn at 31.12.2023.

In addition to these four credit agreements, Bustadkreditt and Sparebanken Sogn og Fjordane have signed an ISDA agreement. The ISDA agreement regulates all derivative transactions between the parties. The ISDA agreement has the same structure as agreements between Sparebanken and external entities, which means that changes in the value of interest rate swaps are measured daily and there is an exchange of collateral. When fixed-rate covered bonds are issued, SSF hedges the relevant amount with an external party and then performs an internal swap with Bustadkreditt.

All agreements and transactions adhere to arm's length principles.

Note 22 Auditor's fee

	2023	2022
Statutory audit incl. VAT	117	120
Inspection fees incl. VAT	103	57
Other services not related to auditing incl. VAT	0	0
Total	220	177

Note 23 Tax expense

	2023	2022
Tax payable for the period	38 420	31 436
Excess tax provision for last year	0	0
Total tax payable	38 420	31 436
Change in deferred tax/tax assets		
Deferred tax relating to the origination and reversal of temporary differences	2 022	2 350
Total change in deferred tax/tax assets	2 022	2 350
Total tax expense	40 442	33 786
Reconciliation of expected tax expense with actual tax expense		
Profit/loss before taxation	183 827	152 698
Expected income tax applying nominal tax rate of 22%	40 442	33 594
Reduction in income tax	0	0
Shortfall in allocation last year	0	0
Other differences	0	192
Tax expense	40 442	33 786
Tax payable	38 420	31 436
Tax payable on balance sheet	38 420	31 436

BREAKDOWN OF THE TAX IMPACT OF TEMPORARY DIFFERENCES

Deductible temporary differences

Financial instruments	0	0
Income statement	46	57
Total deductible temporary differences	46	57

Taxable temporary differences

Financial instruments	27 104	17 923
Income statement	0	0
Total taxable temporary differences	27 104	17 923

Net difference	- 27 058	- 17 866
Net deferred tax liabilities (-) / assets (+) on the balance sheet	- 5 953	- 3 930

The tax rate for tax payable and deferred tax assets/liabilities was 22%, both in 2023 and 2022.

Deferred tax assets are only recognised to the extent that it is probable that it will be possible to offset them against future taxable income.

The tables show the agreed maturity date.

*) The terms allow for the maturity date to be extended by one year.

All of the loans are denominated in NOK.

All loan agreements are subject to standard loan terms.

Note 29 Other liabilities and provisions

	2023	2022
Accrued costs and advance income	0	6
Other liabilities	1 730	954
Loss allowance for undrawn credit facilities	292	142
Total other liabilities and provisions	2 022	1 102

Note 30 Off-balance-sheet obligations

The company has no off-balance-sheet obligations.

Note 31 Disputes

Bustadkreditt Sogn og Fjordane AS was not involved in any disputes in 2023.

Note 32 Share capital and shareholder information

At 31.12.2023, the Company's share capital was made up of the following classes of shares

	Number	Face value	Carrying amount (in 000s of NOK)
Class A shares	21 500 000	100	2 150 000
Total	21 500 000		2 150 000

Ownership structure

Biggest shareholders in the Company at 31.12.2023

	Class A shares	Ownership interest	Share of voting rights
Sparebanken Sogn og Fjordane	21 500 000	100 %	100 %
Total number of shares	21 500 000	100 %	100 %

Neither the members of the Board of Directors nor the CEO own any shares or options.

Note 33 Financial derivatives

Bustadkreditt Sogn og Fjordane AS trades in financial derivatives in order to hedge and manage market risk and in conjunction with issuing fixed-rate bonds. It does not trade in foreign exchange contracts, so all of its financial derivatives are interest rate contracts. The contracts are measured at fair value.

	Total nominal values	2023 Positive market value	Negative market value	Total nominal values	2022 Positive market value	Negative market value
Interest rate contracts						
Swaps	5 025 000	54 361	327 609	5 025 000	68 628	340 847
Total financial derivatives	5 025 000	54 361	327 609	5 025 000	68 628	340 847

Note 34 Hedge accounting

Bustadkreditt Sogn og Fjordane uses hedge accounting for fixed-rate debt securities in issue. The aim is to counteract fluctuations in the value of the bond in issue. The hedged item (the bond in issue) is measured at fair value through "Net gains/losses on financial instruments" and the hedging instrument (the derivative) is measured at fair value with changes in value recognised through "Net gains/losses on financial instruments".

Sparebanken Sogn og Fjordane is the counterparty to all of the derivatives contracts, and there is an ISDA master agreement between the parties governing all of their derivatives trading. Within this framework, changes in the value of derivative contracts are measured daily and collateral is exchanged between the parties in the event of any fluctuations, in order to reduce the risks for both parties.

At 31.12.2023, hedge accounting was used for twelve hedge relationships where the hedged item and hedging instrument were closely related through being subject to exactly the same terms and conditions (interest rate, term to maturity, face value). The hedge effectiveness has been calculated based on 1% shifts in the yield curve and what the impact on profit of this would be.

	2023	2022
Hedging instrument		
Nominal opening value	5 025 000	5 025 000
Change in value (+gain/-loss)	- 1 346	232 221
Hedged item		
Nominal opening value	5 025 000	5 025 000
Change in value (+gain/-loss)	- 2 219	- 224 601
Net change in value - hedge ineffectiveness (+gain/-loss)	- 3 566	7 620
Hedge ratio	100,00 %	100,00 %
Weighted hedge effectiveness	99,47 %	104,28 %

Hedge accounting has been used for the following covered bonds and their associated hedging instruments

	Nominal value	Remaining term to maturity
SSFBK15PRO		
<i>Hedged item</i>	1 000 000	31.08.2033
<i>Hedging instrument</i>	1 000 000	31.08.2033
SSFBK17PRO (split in three tranches)		
<i>Hedged item</i>	1 000 000	20.09.2034
<i>Hedging instrument</i>	1 000 000	20.09.2034
SSFBK18PRO		
<i>Hedged item</i>	1 000 000	19.06.2030
<i>Hedging instrument</i>	1 000 000	19.06.2030
SSFBK22PRO		
<i>Hedged item</i>	500 000	31.08.2037
<i>Hedging instrument</i>	500 000	31.08.2037
SSFBK23PRO		
<i>Hedged item</i>	1 000 000	04.10.2029
<i>Hedging instrument</i>	1 000 000	04.10.2029
SSFBK24PRO		
<i>Hedged item</i>	525 000	30.08.2032
<i>Hedging instrument</i>	525 000	30.08.2032

DECLARATION BY THE BOARD OF DIRECTORS AND CEO

We declare that, to the best of our knowledge, the interim financial statements for 2023 have been prepared in accordance with current accounting standards, and that the information contained therein provides a true picture of the assets, liabilities, financial position and results of the Company. The Board believes that the interim report gives a true picture of the performance, results and financial position of the Company, and assesses the most important areas of uncertainty and potential risks it faces.

Irene Flølo
CEO

To the General Meeting of Bustadkreditt Sogn og Fjordane AS

INDEPENDENT AUDITOR'S REPORT

Opinion

We have audited the financial statements of Bustadkreditt Sogn og Fjordane AS (the Company), which comprise the balance sheet as at 31 December 2023, the income statement, statement of changes in equity and statement of cash flows for the year then ended, and notes to the financial statements, including a summary of significant accounting policies.

In our opinion

- the financial statements comply with applicable statutory requirements, and
- the financial statements give a true and fair view of the financial position of the Company as at 31 December 2023, and its financial performance and its cash flows for the year then ended in accordance with International Financial Reporting Standards as adopted by EU.

Our opinion is consistent with our additional report to the Audit Committee.

Basis for Opinion

We conducted our audit in accordance with International Standards on Auditing (ISAs). Our responsibilities under those standards are further described in the *Auditor's Responsibilities for the Audit of the Financial Statements* section of our report. We are independent of the Company as required by relevant laws and regulations in Norway and the International Ethics Standards Board for Accountants' International Code of Ethics for Professional Accountants (including International Independence Standards) (IESBA Code), and we have fulfilled our other ethical responsibilities in accordance with these requirements. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

To the best of our knowledge and belief, no prohibited non-audit services referred to in the Audit Regulation (537/2014) Article 5.1 have been provided.

We have been the auditor of the Company for seven years from the election by the general meeting of the shareholders on May 5 of 2017 for the accounting year 2017.

Key Audit Matters

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the financial statements of the current period. These matters were addressed in the context of our audit of the financial statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters.

IT-systems and internal controls relevant for financial reporting

Key Audit Matter	How the matter was addressed in the audit
<p>The IT systems within Bustadkreditt Sogn og Fjordane AS ("Bustadkreditt") are key in the accounting and reporting of completed transactions, in obtaining the basis for key estimates and calculations, and in obtaining relevant information to be disclosed.</p> <p>The IT systems are mainly standardized, and the management and operation of the systems are to a great extent outsourced to external service providers.</p> <p>Proper management and control of these IT systems both from Bustadkreditt and their service providers are of high importance in order to ensure precise, complete and reliable financial reporting, and this area is therefore considered to be a key audit matter.</p>	<p>Bustadkreditt has established a general governance model and internal controls on their IT systems. We have obtained an understanding of Bustadkreditt's IT governance model relevant for financial reporting.</p> <p>We assessed and tested the design of selected internal control activities relevant for financial reporting, including selected controls related to IT operations, change management and information security. For a sample of these controls, we tested their operating effectiveness in the reporting period.</p> <p>We considered the third-party attestation report (ISAE 3402 Report) from Bustadkreditt's core system service provider, focusing on whether they had adequate internal controls on areas that are of importance to the financial reporting of Bustadkreditt.</p> <p>We also considered the third-party attestation report (ISRS 4400 Agreed-upon procedures) from the core system service provider focusing on whether selected automated control activities in the IT-systems, including among others the calculation of interests and fees and selected system generated reports, were adequately designed and implemented in the period.</p> <p>We have engaged our internal IT experts in the work related to understanding the governance model on IT and in assessing and testing the internal control activities.</p>

Other Information

The Board of Directors and the Managing Director (management) are responsible for the information in the Board of Directors' report and the other information accompanying the financial statements. The other information comprises information in the annual report, but does not include the financial statements and our auditor's report thereon. Our opinion on the financial statements does not cover the information in the Board of Directors' report nor the other information accompanying the financial statements.

In connection with our audit of the financial statements, our responsibility is to read the Board of Directors' report and the other information accompanying the financial statements. The purpose is to consider if there is material inconsistency between the Board of Directors' report and the other information accompanying the financial statements and the financial statements or our knowledge obtained in the audit, or whether the Board of Directors' report and the other information accompanying the financial statements otherwise appear to be materially misstated. We are required to report if there is a material misstatement in the Board of Directors' report or the other information accompanying the financial statements. We have nothing to report in this regard.

Based on our knowledge obtained in the audit, it is our opinion that the Board of Directors' report

- is consistent with the financial statements and
- contains the information required by applicable statutory requirements.

Responsibilities of Management for the Financial Statements

Management is responsible for the preparation of financial statements that give a true and fair view in accordance with International Financial Reporting Standards as adopted by the EU, and for such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is responsible for assessing the Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless management either intends to liquidate the Company or to cease operations, or has no realistic alternative but to do so.

Auditor's Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As part of an audit in accordance with ISAs, we exercise professional judgment and maintain professional scepticism throughout the audit. We also:

- identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error. We design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control.
- evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management.
- conclude on the appropriateness of management's use of the going concern basis of accounting, and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Company's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Company to cease to continue as a going concern.
- evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events in a manner that achieves a true and fair view.

We communicate with the Board of Directors regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We also provide the Audit Committee with a statement that we have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, related safeguards.

From the matters communicated with the Board of Directors, we determine those matters that were of most significance in the audit of the financial statements of the current period and are therefore the key audit matters. We describe these matters in our auditor's report unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, we determine that a matter should not be communicated in our

report because the adverse consequences of doing so would reasonably be expected to outweigh the public interest benefits of such communication.
