Alternative Performance Measures (APMs)

SpareBank 1 SR-Bank presents alternative performance measures (APMs), which provide useful, supplementary information to the financial statements. The measures are not defined in IFRS (International Financial Reporting Standards) and are not necessarily directly comparable with other companies' performance measures. APMs are included in our reports to provide insight and understanding of the group's performance and represent important target figures for how the executive management team manages the companies and activities in the group. APMs are not intended to replace or overshadow accounting figures. Key figures that are regulated by IFRS or other legislation are not regarded as APMs. The same applies to non-financial information. SpareBank 1 SR-Bank's APMs are presented in the overviews main figures and results from the interim accounts, as well as in the board of directors' report. All APMs are presented with corresponding figures. The APMs listed below have generally been used consistently over time.

Alternative performance measures in SpareBank 1 SR-Bank with definitions:	Explanations and definitions
Profitability	
Return on equity	Return on equity provides relevant information about the group's profitability by measuring its ability to generate profitability from the shareholders' investment. Return on equity is one of the group's most important financial target figures and is calculated as the ordinary result available to shareholders for the period as a percentage of average equity, less hybrid capital (hybrid tier 1 capital) classified as equity.
Cost to income ratio	Provides information about the correlation between income and costs. Calculated as total operating costs divided by total income.
Cost to income ratio Banking Group	The cost to income ratio for the banking group equals the banking group's total income less net income from financial investments divided by costs. The banking group includes SpareBank 1 SR-Bank (parent bank) and SR-Boligkreditt AS.
Average interest margin	Measures the group's average profit from loans and deposits, calculated as net interest income as a percentage of average total assets.
Lending margin corporate market, SME & agriculture and retail market	The lending margin provides information about the group's net interest income by measuring the interest margin relative to the 3-month money market rate. The lending margin is calculated as net interest income on loans, less interest costs equivalent to the 3-month money market rate, divided by the average lending for the period.
Deposit margin corporate market, SME & agriculture and retail market	The deposit margin provides information about the group's net interest income by measuring the interest rate margin relative to the 3-month money market rate. The deposit margin is calculated as net interest cost on deposits, adjusted for interest income equivalent to the 3-month money market rate, divided by average deposits for the period.
Combined weighted average interest margin	Combined weighted average interest margin for lending to and deposits from customers is calculated as: Total margin income on loans and deposits relative to total average performing loans and deposits.
Balance sheet figures	
Growth in loans over last 12 months	Information about the activity and growth in the group's lending activities. This key figure is calculated as gross loans at the end of the period less gross loans at the start of the period, divided by gross loans at the start of the period.
Growth in deposits over last 12 months	Information about the activity and growth in the group's deposit business. This key figure is calculated as deposits from customers at the end of the period less deposits from customers at the start of the period.
Deposit to loan ratio	Provides relevant information about the group's liquidity and is calculated as deposits from customers divided by total loans to customers at the end of the period.
Impairments on loans and financial commitments and loans and financi	al commitments in Stage 2 and Stage 3
Impairment ratio, annualized Loans and financial commitments in Stage 2 in % of gross loans and financial commitments	Recognised impairments on loans and financial commitments measured relative to gross loans. This is calculated as a function of gross loans and provides some information about how large a percentage of gross loans are subject to impairments. The figure is calculated as impairments on loans and financial commitments recognised in the period divided by average gross loans in the period. When information is provided about impairment percentages for periods of shorter than a full year, the recognised impairments are annualized. Provides relevant information about the bank's credit exposure. Calculated as loans and financial commitments in Stage 2 divided by gross loans and financial commitments at the end of the period. Loans and financial commitments in Stage 2 are loans and financial commitments that have seen a significant rise in credit risk since initial recognition, but where there is no objective evidence of a loss event on the balance sheet date.
Loans and financial commitments in Stage 3 in % of gross loans and financial commitments	Provides relevant information about the bank's credit exposure. Calculated as loans and financial commitments in Stage 3 divided by gross loans and financial commitments at the end of the period. Loans and financial commitments in Stage 3 are loans and financial commitments that have seen a significant rise in credit risk since granting and where there is objective evidence of a loss event on the balance sheet date.
SpareBank 1 SR-Bank share	
Book equity per share (including dividends)	This key figure provides information about the value of the book equity per share and a basis for assessing the reasonableness of the share price. Calculated as equity at the end of the period divided by the number of shares.
Price/earnings per share	Earnings per share compared to the share price at the relevant time, which provides a basis for assessing the reasonableness of the share price. Calculated as the share price divided by the annualized earnings per share.
Price/book equity	The value of book equity per share compared with the share price at a given time. Provides a basis for assessing the reasonableness of the share price. Calculated as the share price divided by book equity per share (see the definition of this key figure above).
